## User Flow Chart

## Wireframes

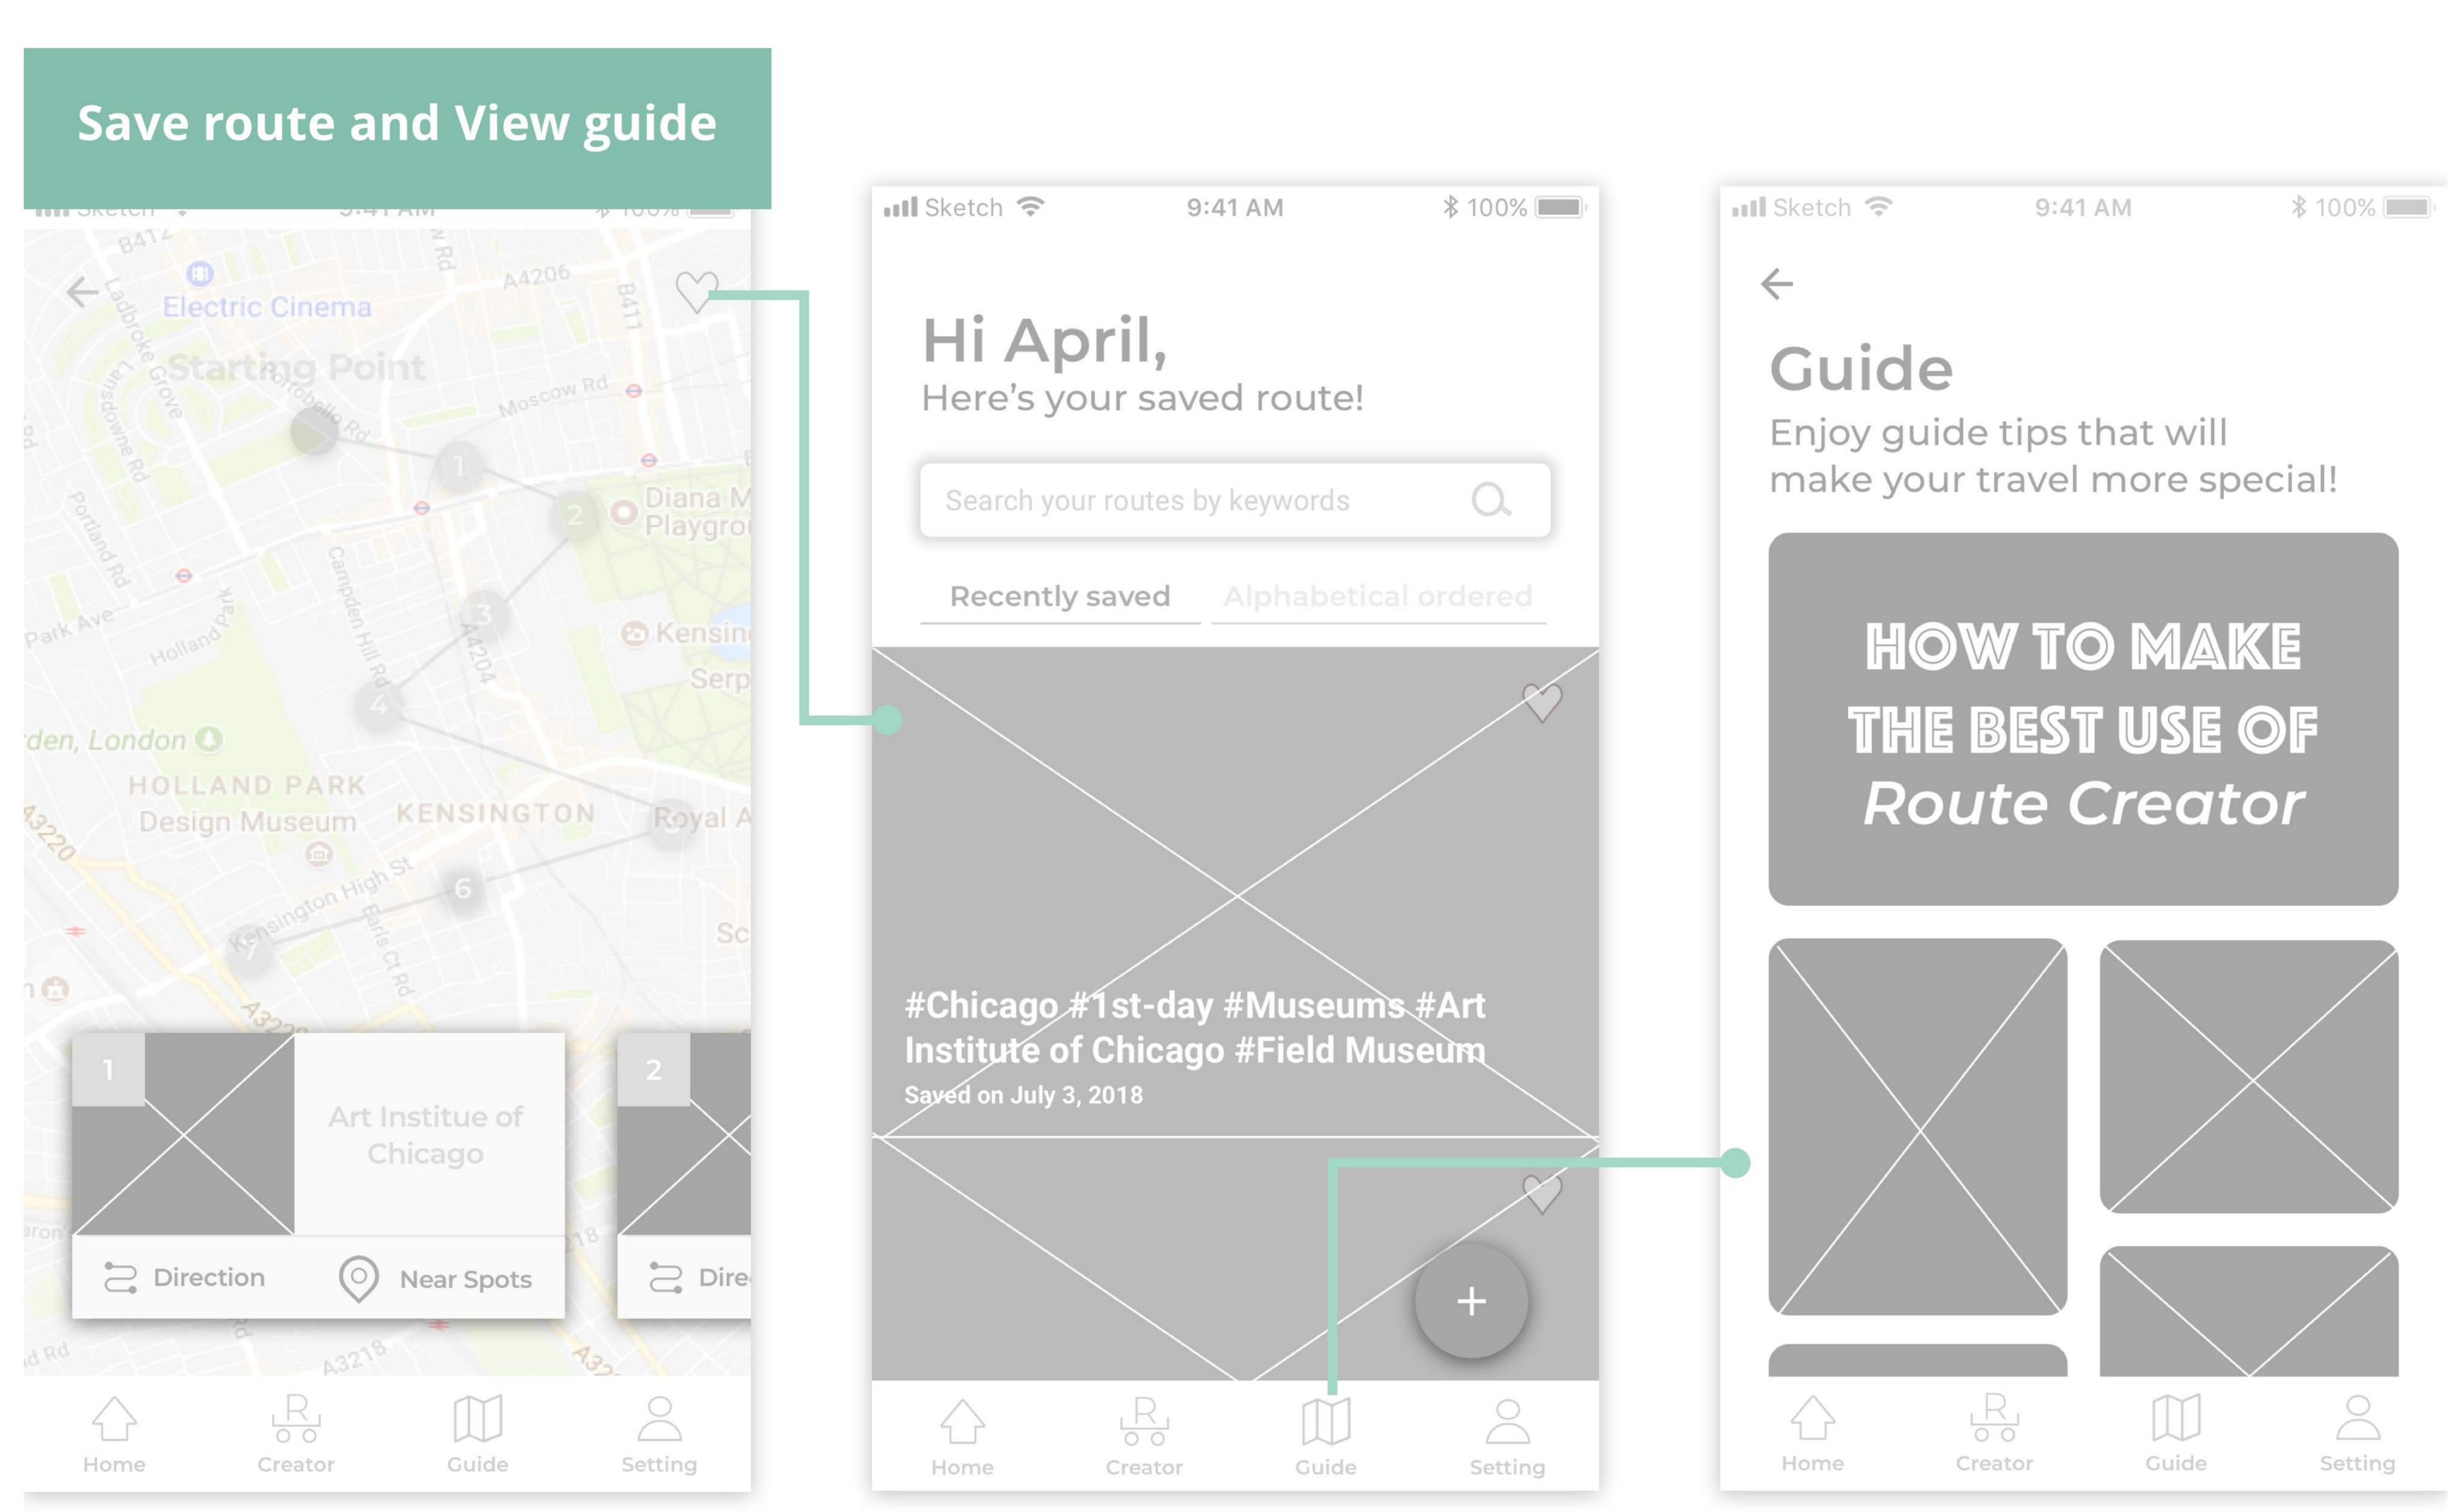

Home screen allows users to see their own routes previously created and saved by users. By tapping Floating Action Btn (FAB) on Home screen, users can search places to add to their Creator tap. Search results show realtime information that users should know when visiting the places.

Creator Tap allows users to add and delete places flexibly like shopping cart. With places checked, Creator allows users to check-out for creating routes.

When checking out, users also can see detailed information about the places they added, including basic description, gallery, and reviews.

Finally, users put starting points, usually where they stay, to create their own route as for the last step.

Route Creator shows the most efficient routes. Each card below also provides directions including transportations, and recommends near popular spots.

Saved routes are shown on Home screen, that users always create or delete their own routes easily, quickly, and flexibly.

Guide tap allows users to learn how to best use of the service. Also, provides useful tips for their trip.
